HIMEL DEBNATH

DATA SCIENTIST ASPIRANT

[Dhaka, Bangladesh] | [www.himel4200@gmail.com] | [01789156469] | [https://www.kaggle.com/debnathhimel] | [https://github.com/himel7009]

PROFESSIONAL SUMMARY

Final-year Computer Science student with a strong foundation in data analysis, machine learning, and deep learning, currently focused on turning theoretical knowledge into practical implementation. Experienced in working with Python-based data tools including Pandas, NumPy, Matplotlib, and Seaborn, as well as Excel and Power BI for data analysis and visualization. Familiar with classical machine learning using Scikit-learn and actively developing hands-on experience with deep learning using PyTorch and TensorFlow, including medical imaging, image segmentation, and classification projects. Seeking a Data Analyst role where I can apply my analytical, programming, and machine learning skills to real-world data and business problems while continuing to grow as an AI/ML professional..

TECHNICAL SKILLS

Languages & Querying: Python, SQL

Data Analysis & Manipulation: Pandas, NumPy, Scikit-learn,PowerBI,Excel,SQL

Data Visualization: Power BI (DAX, dashboard design), Matplotlib/Seaborn

Machine Learning / Deep Learning: PyTorch, TorchVision, OpenCV, Sikit-learn

Tools & Platforms: Kaggle, Git, Conda, Overleaf, Jupyter, Firebase

PROJECTS & APPLIED ANALYSIS

Food Delivery Analytics Dashboard (Power BI)

Business Intelligence & Data Visualization

Live report: View Power BI dashboard ↗️

- Built an interactive Power BI dashboard on a simulated food-delivery dataset (modeled on Foodpanda-style operations), designing DAX measures and visuals to surface order volume, revenue, and delivery-time trends across [N] simulated records.
- Structured the report into drill-down views by [region/time period/restaurant category] so a non-technical stakeholder could filter and interpret KPIs without needing to query the underlying data directly.

Binary Classification of Alzheimer's Disease: A Comparative Study of Custom CNN, DenseNet121, and ResNet50

University Course Project · AI / Machine Learning

Project report: View report (PDF) ↗️

- Compared three modeling approaches — a custom CNN, DenseNet121, and ResNet50 — on the same Alzheimer's classification dataset, evaluating each on [accuracy/precision/recall/F1] to determine which architecture generalized best.

- Documented trade-offs between model complexity and performance across the three architectures, presenting results in a comparative report to support a clear, evidence-based recommendation.

Calculus Navigator — Adaptive Learning Platform

GitHub: github.com/himel7009/calculus-navigator

- Designed a gamified web platform (HTML5, CSS3, JavaScript, Tailwind CSS, Firebase Auth/Firestore) to help high-school students learn calculus through interactive tools including a skill-tree roadmap, a graphing sandbox, and an AI-powered tutor built on the Gemini API.
- Used Chart.js to visualize student progress data and Firestore to persist user activity, structuring the data model to support per-user progress tracking across [N] practice modules.

Teacher Assistant App — Course & Student Activity Manager

Group Project (CSC464: Mobile Application Development) · Flutter

GitHub: View repository ↗️

Demonstration:

https://drive.google.com/file/d/1G1IcH8gaJnuZxVCczSTRPqU6w17uP8X4/view

- Collaborated in a 3-person team to build a Flutter mobile app for teaching assistants to manage course schedules and track student activity records, contributing to [Added Firebase configuration,Added Firebase Core and Cloud Firestore,Created an Add Student form,Reworked the course editing screen].

EDUCATION

[B.Sc. in Computer Science & Engineering (CSE)]

[December, 2026]

[Independent University Bangladesh] — [Dhaka, Bangladesh]

- CGPA 3.48
